                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
chemokine receptor 4.";
J. Biol. Chem. 273:1764-1768(1998).

-1 FUNCTION: MAY PLAT A ROLE IN THE TRAFFICKING OF ACTIVATED/EFFECTOR
T LYMPHOCYTES TO INFLAMMATORY SITES AND OTHER ASPECTS OF ACTIVATED
T LYMPHOCYTE PHYSIOLOGY. CHEMOTACTIC FOR MONOCYTES, DENORITIC
CELLS AND NATURAL KILLER CELLS. MILD CHEMOATTRACTANT FOR PRIMARY
ACTIVATED T LYMPHOCYTES AND A POTENT CHEMOATTRACTANT FOR
CHRONICALLY ACTIVATED T LYMPHOCYTES BUT HAS NO CHEMOATTRACTANT
ACTIVITY FOR NEUTROPHILS, EOSINOPHILS, AND RESTING T LYMPHOCYTES.
BINDS TO CCR4.
                                                                                                                                                          SUBCELLULAR LOCATION: Secreted.
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN MACROPHAGE AND IN
MONCYTE-DERIVED DENDRIFIC CELLS, AND THYMUS. ALEO FOUND IN LYMPH
NODE, APPENDIX, ACTIVATED MONOCYTES, RESTING AND ACTIVATED
MACROPHAGES. LOWER EXPRESSION IN LUNG AND SPLEEN. VERY WEAK
STRRESSION IN SMALL INTESTINE.
SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE
C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MARLQTALLVVLVLLAVALQATEAGPYGANMEDSVCCRDYVRYRLPLXVVXHFXWTSDSC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS LYMPHOCYTES BUT NOT MONGOTES OR GRANULOCYTES. MAY BE INVOLVED IN B CELL MIGRATION INTO B CELL FOLLICLES IN LYMPH NODES. ATTRACTS NAIVE T LYMPHOCYTES TOWARD DENDRITIC CELLS AND ACTIVATED MACROPHAGES IN LYMPH NODES, HAS CHEMOTACTIC ACTIVITY FOR NAIVE T CELLS, CD4+ AND CD8+ T CELLS AND THUS MAY PLAY A ROLE IN BOTH HUMORAL AND CELL-MEDIATED INMUNITY RESPONSES.

"Cytokine-induced neutrophil chemoattractant (CINC)-2 alpha, a novel member of rat GRO/CINCs, is a predominant chemokine produced by lipopolysaccharide-stimulated rat macrophages in culture.";

Biochem. Biophys. Res. Commun. 220:945-948(1996).

-! FONCTION: MONOKINE WITH INFLAMMATORY AND CHEMOKINETIC PROPERTIES.
HAS CHEMOTACTIC ACTIVITY FOR MONOCYTES, NEUTROPHILS, EOSINOPHILS, BASOPHILS, AND LYMPHOCYTES. REQUIRED FOR LUNG TNF-ALPHA PRODUCTION, NEUTROPHIL RECRUITMENT AND SUBSEQUENT LUNG INJURY AND MAY FUNCTION AS AN AUTOCRINE MEDIATOR FOR THE MARCHOPHAGE PRODUCTION OF THE "ALCOMA WHICH IN TORN UP-REGULATES VASCULAR ADHESION MOLECULES REQUIRED FOR NEUTROPHIL INFLUX. 1. TATALES. 1

1. TATALES. 1

1. TATALES. 1

2. INTERFERENCE CYTCKINE Res. 19:227-234(1999).

2. INTERFERENCE THAT ALSO RECGGNIZE MIP-1 ALPHA. IT INDUCED

1. TATALED CA2+ CHANGES AND ENZYME RELEAST, BUT NO CHEMOTAXIS,

2. AT CONCENTRATIONS OF 100-1, 000 NM, AND WAS INACTIVE ON T

1. YMPHOCYTES, NEUTROPHILS, AND EOSINOPHIL LEUKOCYTES. ENHANCES THE

PROLIFERATION OF CO34 WYELLOID PROGENITOR CELLS.

2. INTERNATIVE PRODUCTS: 2 ISOFORMS; HCC-1 (SHOWN HERE) AND HCC-3;

3. ARE PRODUCED BY ALTERNATIVE SPLICING.

2. ILSSUES SPECIFICITY: EXPRESSED CONSTITUTIVELY IN SEVERAL NORMAL

2. TISSUES SPECIFICITY: EXPRESSED CONSTITUTIVELY IN SEVERAL NORMAL

2. TISSUES: SPEERN, LIVER, SKEEFTAL AND HEART MUSCLE, GUT, AND BONE

3. MARROW, PRESENT AT HIGH CONCENTRATIONS (1-80 NM) IN PLASMA.

3. CONTRACTOR OF COST THE INTERCRINE BETA FAMILY (SMALL CYTOKINE)

Submitted (FEB-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: CHEMOATTRACTANT FOR BLOOD MONOCYTES, MEMORY T HELPER
CELLS AND EOSINOPHILS. CAUSES THE RELEASE OF HISTAMINE FROM
BASOPHILS AND ACTIVATES EOSINOPHILS (BY SIMILARITY).
-!- SUBCELLUAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE
C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                       1 LGPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPW
                                            A new macrophage derived chemokine, MDC, a member of the C-C (Cys-Cys) subfamily of cytokines has been isolated. MDC and it's analogues may be used in the treatment of inflammatory diseases especially diseases characterised by monocyte chemotaxis towards a site of inflammation. MDC and it's analogues also induce fibroblast proliferation having a positive effect in wound healing and angiogenesis. They may prove to be clinically important in the treatment of tumours, by directly or indirectly inhibiting tumour formation. Antibodies directed against MDC and its analogues may be used in the treatment of Crohn's disease, rheumatoid arthritis and atherosclerosis. Probes and/or primers for the identification of MDC encoding sequences can be derived from MDC encoding sequences.
                                                                                                                                                                                                                                                              0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (MDC)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a macrophage derived chemokine analogue. The MDC analogue is capable of inhibiting MDC induced chemotaxis. Therefore, the MDC analogue may be used to modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Macrophage derived chemokine analogues useful for inhibiting macrophage derived chemokine-induced chemotaxis

                                                                                                                                                                                                                                                                                                                                                                                                                                           inflammatory and immune responses allowing for the treatment of disorders associated with excessive inflammation or overactive immune responses. Inflammatory disorders which may be treated in this way include Crohn's disease (manifested by chronic inflammation of the bowel), atherosclerosis, arthritis and pulmonary fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents synthetic analogue MDC(n+1) of the novel human macrophage derived C-C chemokine MDC (see also AAY05811). MDC(n+1) consists of a Leu residue following by amino acid residues an entagonist of mature polypeptide. The analogue is expected to be an antagonist of MDC activity, inhibiting activity by competitively binding to the receptor that recognises MDC or by forming inactive heterodimers with MDC. MDC antagonists are used in claimed methods for the preparation of medicaments for the suppression of the proliferation of a mammalian immunodeficiency virus, for inhibiting
                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vertebrate Macrophage Derived Chemokines, analogues and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    platelet aggregation in a mammal, for the treatment or palliation of lupus erythematosus in a mammal, for inhibiting MDC-induced citration, chemotaxis or proliferation of cells that express CCR4, for inhibiting or palliating an allergic reaction in a mammal, and for treating asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antagonist: chemoattractant; antiproliferative; dermatological; immunosuppressive; antiinflammatory; antiasthmatic; antiaggregant; asthma; allergy; HIV; infection; lupus erythematosus; therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HTV antigen. Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein-3 (MCP-3) and human Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-1; (3) human macrophage-derived chemokine (MDC) and human Muc-1; (4) human SDF-1 and human Muc-1; (5) human IP-10 and HTV gp120; (6) human MCP-3 and HTV gp120; (7) human MDC and HTV gp120; and (8) human SDF-1 and HTV gp120; The fusion proteins, and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune response. They can also be used for treating can creating or treating or treating or treating or treating or preventing HTV infection. The fusion proteins and/or nucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of tumour antigen epitopes. The present sequence represents a specifically

Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein-3 (MCP-3) and human Muc-1: (2) human interferon-induced protein-13 (MCP-3) and human Muc-1: (3) human interferon-induced protein-10 (MCP-3) and human Muc-1: (3) human macrophage-derived chemotaine (MDC) and human Muc-1: (4) human SDF-1 and human Muc-1: (5) human in the fusion of the fusion of the fusion of the fusion of the fusion proteins, and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune response. They can also be used for treating cancer or treating or preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 LGPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPW 60

The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HIV antigen. Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein-3 (MCP-3) and human Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-1; (3) human macrophage-derived chemokine (MDC) and human Muc-1; (4) human MC-1; (5) human Muc-1; (6) human Muc-1; (7) human Muc-1; (8) human Muc-1; (9) human Muc-1; (1) human Muc-1; (1) human Muc-1; (2) human macrophage-derived chemokine (MDC) and human Muc-1; (1) human Muc-1; (2) human Muc-1; (3) human Muc-1; (4) human macrophage-derived and HIV gpl20; (7) human MDC and HIV gpl20; and (8) human SPF-1 and HIV gpl20; (7) human MDC and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of tumour antigen epitopes. The present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 LGPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPW 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polymer-modified bloactive synthetic chemokines and to methods for their production and use. The compounds and methods of the backbone of the invention are useful in the analysis and treatment of various diseases states e.g. HIV and AIDS related disorders, asthma, allergic rhinitis, atopic dermatitis, atheroma/atherosclerosis, organ transplant rejection, and rheumatoid arthritis. This sequence represents the human chemokine MDC protein of the invention.
                                                                            Human; chemokine; anti-HIV; antiasthmatic; antiarthritic; antirheumatic; antiarteriosclerotic; dermatological; antiinflammatory; antiallergic; immunosuppressive; polymer-modified bioactive synthetic chemokine; HIV; AIDS; asthma; allergic rhinitis; atopic dermatitis; rheumatoid arthritis; atheroma; atherosclerosis; organ transplant rejection; MDC.

                                                                                                                                                                                                                                                                                                                                                                                                           1 GPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPWW 60
                                                                                                                                                                               Chemokine receptor modulator useful for treating e.g. asthma, allergic rhinitis comprises a chemically modified carboxyl-terminus and/or amino terminus analogs .
                                                                                                                                                                                                                                          The present invention relates to chemokine receptor modulators, which comprise a chemokine polypeptide chain modified at N-terminus with an aliphatic chain and at least one amino acid derivatives and/or modified at its C-terminus with an aliphatic chain or polycyclic. The modulators can be used to treat diseases such as HIV infection, AIDS, asthma, allergic rhinitis, atopic dermatitis, atheroma, atherosclerosis, organ transplant rejection and rheumatoid arthritis. The present sequence is

Nucleic acid sequences encoding the chemokines can be used for detection, in e.g. forensic techniques. Antibodies and other binding agents may be used in diagnostics. The chemokines themselves are useful. for treatment of, e.g. cancer or degenerative conditions. Abnormal proliferation, regeneration, degeneration or atrophy may be treated by
                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents a novel human chemokine protein, 331D5 which has

                                                                                                                                                   A new macrophage derived chemokine, MDC, a member of the C-C (Cys-Cys) subfamily of cytokines has been isolated. MDC and it's analogues may be used in the treatment of inflammatory diseases especially diseases characterised by monocyte chemotaxis towards a site of inflammation. MDC and it's analogues also induce fibroblast proliferation having a positive effect in wound healing and angiogenesis. They may prove to be clinically important in the treatment of tumours, by directly or indirectly inhibiting tumour formation. Antibodies directed against MDC and its analogues may be used in the treatment of Crohn's disease, rheumatoid arthritis and atherosclerosis. Probes and/or primers for the identification of MDC encoding sequences can be derived from MDC encoding sequences.
                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human STCP-1 polypeptides with chemokine activity - useful e.g. to
                                                                                   Macrophage derived chemokine (MDC) and analogues - used in the treatment of inflammatory diseases, MDC antibodies used to treat Crohn's disease, rheumatoid arthritis, etc.

The present sequence represents human STCP-1. STCP-1 polypeptides are useful demonstrate chemokine activity for T-cells. The polypeptides are useful prophylactically or therapeutically to treat HIV infection and other conditions associated with viral/bacterial pathogens infecting T-cells. The conditions associated with viral/bacterial pathogens infecting T-cells. They can be included controphages or other immune system cells. They can be included corrier and optionally other pharmaceuticals (e.g. AZT, antiblotics etc.) in therapeutic compositions for treating these conditions. STCP-1 also useful to assay for inhibitory compounds used to reduce circulatory system STCP-1 levels to alleviate e.g. joint inflammation associated with rhemmatoid arthritis, lupus or other autoinmune diseases. The polypeptides are also useful to produce hybridisation probes to test for STCP-1 DNA/RNA in mammalian samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2 GPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPWV 61

                                            This sequence represents a novel human chemokine protein, 331D5. Would-late acid sequences encoding the chemokines can be used for detection, in e.g. forensic techniques. Antibodies and other binding agents may be used in diagnostics. The chemokines themselves are useful for treatment
                                                                                                                                                                                                 84
                                                                                                                                                                                                                                                                                                                                                              Macrophage-derived chemokine; MDC; antibody; binding modulator; therapy; arthritis; inflammatory disorder; cancer; Crohn's disease;
                                                                                                                                                              Gaps
                                                                                 of, e.g. cancer or degenerative conditions. Abnormal proliferation, regeneration, degeneration or atrophy may be treated by the inventive
                                                                                                                                                                              2 GPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPWV
                                                                                                                                                                                         This sequence represents the macrophage-derived chemokine (MDC). This protein is used to produce the antibodies of the invention. The antibodies are useful for purifying MDC polypeptides, for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antibodies specific for macrophage-derived chemokine - useful for purifying or detecting the chemokine or modulating its activity

    useful for treatment of, e.g.

                                                                                                                                           Length 93;

ö
endogenous MDC in a host, and for modulating binding of MDC to its receptors. The DNA encoding this sequence can be used for identifying and isolating non-human MDC homologues. The MDC protein is potentially useful for treating inflammatory disorders, cancer, etc. Antagonists of MDC can be used for treating Crohn's disease, arthritis, atherosclerosis etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is macrophage-derived chemokine. This belongs to the CC class of chemokines. The efficacy of a vaccine is enhanced by combining it with one or more chemokines to enhance the immune response to an antigen. This can be humoral or cell-mediated immune response. The purified chemokines, fragments, derivatives or analogues are administered either concurrently with one or more purified antigens against which an immune response is desired or within a time period either before or after antigen administration. The chemokine gene is sisolated by PCK, and administered by constructing an expression plasmid vector which can be expressed in a coordinated manner upon introduction in a suitable cell. The vaccines are immunostimulatory and can be used
                                                                                                                                                                                                                                                                                                                                                                              61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes macrophage derived chemokine (MDC) analogues which are capable of inhibiting MDC induced chemotaxis. Therefore, the MDC analogues may be used to modulate inflammatory and immune responses allowing for the treatment of disorders associated with excessive inflammation or overactive immune responses. Inflammatory disorders which may be treated in this way include Crohn's disease (manifested by chronic inflammation of the bowel), atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                              Macrophage derived chemokine; MDC; chemotaxis; chemotactic cytokine; inflammation; immune response; inflammatory disorder; Crohn's disease; atherosclerosis; arthritis; pulmonary fibrosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 32, Application US/08660542
Patent No. 5932703
GENERAL INFORMATION:
APPLICANT: Godiska, Ronald
APPLICANT: Gray, Patrick W
TITLE OF INVENTION: MACROPHAGE DERIVED CHEMOKINE AND CHEMOKINE
TITLE OF INVENTION: ANALOGS
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS:
ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: 6300 Sears Tower, 233 South Wacker Drive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               95.9%; Score 374; DB 2; Length 69; 97.1%; Pred. No. 2.4e-41;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               COMPUTER READABLE FORM:
